

# Managing safety with a secure fit

## Steering Wheel Safety Cover

Need to repair or service mobile equipment? Let everyone know with a visual barrier, like the **Steering Wheel Safety Cover**. It quickly indicates which forklifts, electric pallet jacks, construction equipment or fleet vehicles are down for service and should not be operated. The brightly colored cover fits over a steering wheel and requires only a padlock, not a hasp like most competitive options. And, a handy pocket on the back of the cover conveniently houses vital information, like inspection cards. The Steering Wheel Safety Cover also provides:

- **A best practice** — ensures safety protocols are being followed while equipment is under maintenance
- **Secure fit** — goes over the steering wheel and is secured with one padlock (no hasp needed)
- **Many options for use** — ideal for many wheel diameters, plus can be used with BatteryBlock™ products
